

## GUARD HOUSE CONTROL ROOM, SAUDI ARABIA

Design project for the workposts located in the **Guard House Control Room** conceived as such as to comprise a Main Control Area and a Supervisor Area, separated with a glass partition.

The proposal employs **Kompas console**, a technical solution specifically designed for 24x7 operations environments, which enables a perfect space management, taking into account the fundamental principles which the equipment used in a control centre must meet, as defined by the ISO11064 normative. KOMPAS console introduces an innovative element called FUNCTIONAL ARC, inspired from the new wave architecture of the 21st century, which is the vertebral axis of the product allowing the sustentation of all the main elements.

It is considered appropriate to plan some workstations which optimize at maximum the space of all operators' work posts, in such a manner that the consoles contemplate integrated CONI type connectivity points

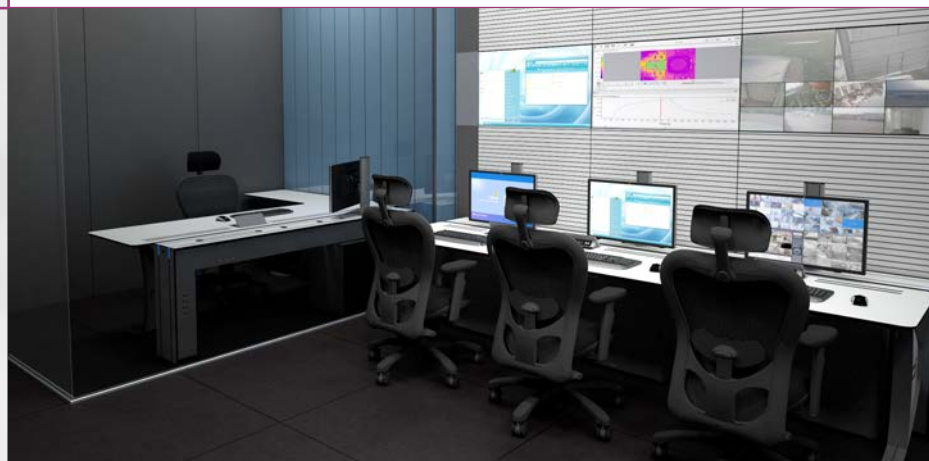

KOMPAS CONSOLE SUPERVISOR INDIVIDUAL CONFIGURATION

in the worksurface for the use of the operators, and individual LCD support arms for a proper organization of all the Screens. The Supervisor's console is adapted as such to include at its left an annexed worktop with a filing module with drawers beneath.

**Scope of the Project:**

Kompas Control consoles | CX0 Extreme ergonomic chairs | Ergonomic solutions for LCD monitors | Ergonomic Desk lamp | Mobile filing drawers.

KOMPAS CONSOLE CONFIGURATION FOR 3 OPERATORS
