

CONTROL CENTRE SANTIAGO DE COMPOSTELLA AIRPORT

Roomdimensions Iberica supplies, vía Elecnor, the new Control Centre of the Santiago de Compostela Airport. The Project Scope included the comprehensive equipping of the operating environment, with a focus on the operator control consoles.

The console model used was the newly redesigned KOMPAS console range, which provides a new specific solution for the installation of the articulated monitor supports, called RAIL SUPPORT SYSTEM, which enables a perfect adjustment of all monitors all along the workpost, and a wider, new access system to the cabling & connectivity area, with more capacity to place the equipment

The operator workposts have been supplemented with the CXO range of specific chairs for 24x7 operations centers, of Nightingale Manufacturer. The CXO chair is probably the best solution for critical operations environments as per the standard FNEW 83-269E-1989: Performance Test Method for intensive Use Chairs, which certifies that the product is validated for intensive use or 24x7.

All elements in contact with the human body are 100% adjustable and adaptable to the morphology of each operator, while the filling of seat uses the Enerfoam system, which is characterized by a high elastic return of the material which provides a high life-cycle and non-deformability of the material as an effect of the human body weight

The Scope of the Project includes:

Design & Project Management | KOMPAS Workstations | Filing drawers | Lockers | Printer modules | Ergo solutions| CXO Chairs

Kompas Console combines a performant high-level design with the most advanced technological features with respect to cable management throughout the FUNCTIONAL ARC, the integration of the connectivity points and location of computer equipment.

Rail Support System, an ensemble that has a dual function: it supports the weight of the worktop and allows the location of monitor supports or different accessories throughout a longitudinal slot so that the elements can move along the console and can be placed in various positions favoring the ergonomics of the workplace

The LED lighting and all the finishes turn KOMPAS into a cutting edge console

Integration of
KOMPAS console
into the
environment

The Kompas console perfectly organizes the control center, where it is necessary to have innovative products with a highly technological design and with the most advanced features from the point of view cable management and connectivity equipment installed.

The ergonomic chair CX0 Extrem Nightingale has been specially chosen for the project. A 24x7 comfort is essential for the operator.

The project scope contemplated as well an entire storage system located in the operating environment, composed of filing cabinets, drawers, lockers, etc ... which are designed and manufactured in the image of the control consoles
