TYPOLOGIES

A technological and functional improvement
expressed through visual simplicity.

CONSOLE STATUS

The first console that, brought its core,
interacts with the user.

4YC CONSOLE STATUS

4YC CONSOLE STATUS is a new module integrated into the 4YC interface platform that has been developed to manage all network signals. It is defined by different parts operated separately or in combination. Through the core of the console, **4YC CS** allows to control the **environment**, the **workstations** and the **console** itself thanks to sensors and actuators.

4YC

- Video wall management
- Environmental elements management

VIDEO USER
MANAGEMENT

- 4YC workplace management

4YC
CONSOLE
STATUS

Console management

- Connectivity ON / OFF
- Desktop components
- Internal console components

Lighting management

- Console status
- Corporate lighting

Height adjustment

- With memory for different operators

Equipment status

- Temperature
- Humidity
- Access control

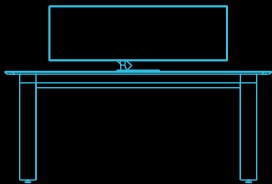

GREAT CONNECTIVITY BETWEEN COMPARTMENTS

Cable management is agile, simple and uninterrupted thanks to the connection of all the compartments and the connectivity points located in different areas of the console.

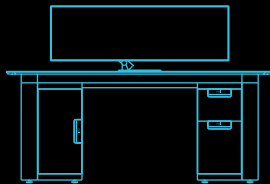

EASY ADAPTATION TO REQUIREMENTS

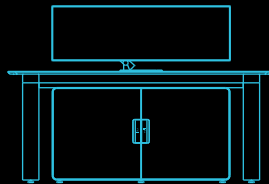

An extremely versatile console due to its high adaptability to any control center. It can be the lightest console or become the highest capacity console by simply combining compartments.

Sides of the console used for small equipment

Racks on sides for pc's

Rear compartment for workstations with high equipment density

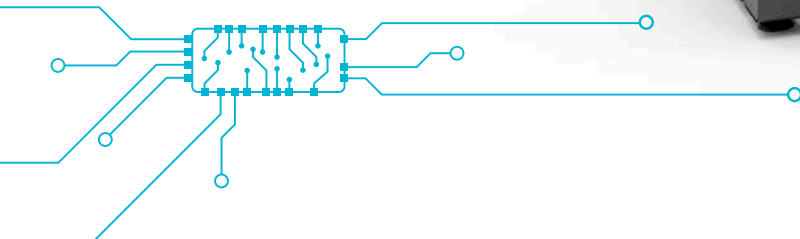

LIFT / STAND POSITION

LITE EVO

HIGH STORAGE

The spacious compartments of the LITE EVO can hold up to 2 PCs per operator plus auxiliary electronics and power strips, making it one of the largest consoles in its segment.
